OVERVIEW

With 30+ years of experience, I've built and scaled delivery and operations at IBM, Vodafone India, Unique Schools App, Launchship, Acclime, and CLAN Learning. At IBM, I led the Vodafone India Account, delivering enterprise-wide billing and compliance systems using AI and AWS, saving \$0.3M/year, and earning delivery excellence awards.

At Launchship, I established a full PMO governance model from scratch. At Acclime, I rolled out HR/payroll systems across nine countries. At CLAN, I led delivery and team operations during early-stage digital growth. At Unique Schools App, I now head ISO 27001 readiness, hybrid operational design, and product governance.

Mostly AI's values around data dignity, trust, and innovation align closely with my experience in regulated, distributed environments.
