The Problem

Campus placements in India remain highly fragmented and inefficient.

Every year, millions of students apply blindly for opportunities while colleges struggle with manual processes, fragmented data, poor visibility, and limited recruiter engagement. Recruiters face challenges in identifying suitable candidates and managing campus hiring efficiently. Despite the scale of the problem, most institutions continue to rely on spreadsheets, emails, and disconnected systems.

The Solution

PlacementHub is a digital platform designed to connect students, educational institutions, and recruiters through a single ecosystem.

The platform enables:

Students

- Profile management
- Internship and job applications
- Interview and offer tracking

Educational Institutions

- Student verification
- Placement process management
- Placement rules enforcement
- Reporting and analytics

Recruiters

- Job and internship postings
- Candidate screening and management
- Hiring workflow support

Current Status

✓ Fully functional end-to-end platform developed

- ✓ Deployed on cloud infrastructure
- ✓ Core workflows completed and operational
- ✓ Demo environment available for review
- ✓ Currently in validation, testing, and commercialization phase
- ✓ Platform Demo: <https://campus-placement-omega.vercel.app/>

Demo Accounts

(Password: Admin@123 for all accounts)

STUDENT — Arjun Verma, IIT Madras arjun.verma@iitm.edu

ALUMNI — Priya Sharma, IIT Madras priya.sharma.alumni@iitm.edu

EMPLOYER — TechCorp Solutions hr@techcorp.com

COLLEGE ADMIN — IIT Madras admin@iitm.edu

SUPER ADMIN — PlacementHub admin@placementhub.com

Market Opportunity

India produces over 15 lakh engineering graduates annually, along with millions of graduates from other disciplines.

The campus recruitment ecosystem involves:

- Educational institutions
- Students and alumni
- Recruiters and employers
- Placement and training departments
- Skill development providers

The market remains largely underserved by integrated solutions.

Business Model & Revenue Strategy

PlacementHub is designed as a multi-sided platform serving educational institutions, students, alumni, recruiters, training providers, industry partners, and service providers.

The initial objective is rapid adoption rather than immediate monetization. To encourage institutional onboarding and establish market presence, the platform may be offered free of charge to educational institutions during the initial phase. This enables PlacementHub to build a large network of colleges, students, recruiters, and alumni while validating product-market fit.

Over time, revenue is expected to be generated through multiple complementary channels:

Institutional Software Subscriptions

Premium institutional services including:

- Placement Management
- Internship Management
- Alumni Engagement
- Advanced Reporting & Analytics
- Accreditation & Compliance Management
- Outcome-Based Education (OBE) Modules
- Institutional Workflow Automation

Recruiter Services

- Employer subscriptions
- Job and internship posting packages
- Campus hiring campaigns
- Employer branding opportunities
- Premium recruiter access

Partner Ecosystem Revenue

PlacementHub intends to collaborate with organizations seeking access to highly targeted student and alumni audiences, including:

- Overseas education providers
- Immigration consultants
- Certification and training providers
- Financial institutions
- Student service providers
- Sports and equipment suppliers
- Technology vendors

Revenue may be generated through lead-generation fees, commissions, subscription arrangements, sponsorships, and revenue-sharing agreements.

Training & Certification Marketplace

The platform may facilitate access to industry-relevant training, certification programs, and employability enhancement services, generating revenue through referral and commission-based arrangements.

Premium Student Services

Potential future offerings include:

- Resume reviews
- Career counselling
- Interview preparation
- Skill assessments
- Employability analytics

Data & Analytics

As the ecosystem grows, anonymized and aggregated market intelligence relating to skills demand, placement trends, hiring patterns, employability metrics, and recruiter preferences may create additional opportunities for analytics-driven services.

The business model is intentionally diversified, reducing dependence on any single revenue source while creating multiple opportunities for long-term recurring revenue.

Go-To-Market Strategy

PlacementHub's go-to-market strategy focuses on institutional adoption as the primary growth engine.

Phase 1 – Platform Adoption

- Offer PlacementHub to selected institutions with minimal barriers to entry.
- Build a base of colleges, students, alumni, and recruiters.
- Establish reference customers and pilot deployments.
- Validate workflows and user engagement.

Phase 2 – Ecosystem Expansion

- Expand recruiter participation.
- Develop partnerships with training providers, service providers, and industry stakeholders.
- Increase student and alumni engagement.
- Build network effects across the ecosystem.

Phase 3 – Monetization

- Introduce premium institutional offerings.
- Launch recruiter subscription plans.
- Activate partner marketplace revenue streams.
- Introduce value-added services for students and alumni.

This phased approach allows PlacementHub to prioritize scale, engagement, and market penetration before aggressive monetization.

Cross-Sell Opportunities

PlacementHub is envisioned as the entry point into a broader higher-education technology ecosystem.

Once institutional relationships are established, additional solutions can be introduced, including:

- Accreditation Management Systems
- NIRF, NAAC and NBA Compliance Management
- Outcome-Based Education (OBE) Platforms
- Alumni Relationship Management
- Internship Management Systems
- Career Services Platforms
- Institutional Analytics and Reporting Tools
- Student Engagement Solutions

This significantly increases customer lifetime value while reducing customer acquisition costs.

Strategic Partner Ecosystem

PlacementHub intends to build a network of strategic partners that benefit from direct access to relevant student and alumni audiences.

Potential partner categories include:

- Recruiters and employers
- Overseas education providers
- Immigration and visa consultants
- Training and certification companies
- Financial institutions
- Insurance providers
- Technology vendors
- Sports and educational suppliers
- Startup incubators and accelerators

The platform creates opportunities for targeted engagement while providing additional value to students and institutions.

Long-Term Vision & Investor Return Potential

The long-term vision is to establish PlacementHub as a comprehensive operating platform for educational institutions.

By integrating placements, internships, alumni engagement, compliance management, accreditation workflows, recruiter services, analytics, and partner ecosystems, the platform aims to create a high-value network with strong recurring revenue potential.

Potential investor value creation pathways include:

- Growth in recurring SaaS revenue
- Expansion of partner marketplace revenue
- Increasing institutional adoption
- High-margin analytics and intelligence services
- Strategic partnerships and acquisitions
- Future fundraising rounds at higher valuations
- Potential acquisition by HRTech, EdTech, recruitment, or institutional software providers

The objective is to build a scalable platform that serves multiple stakeholders across the student lifecycle while creating sustainable long-term enterprise value.

Funding Requirement

PlacementHub is currently seeking pre-seed funding to accelerate product validation, institutional onboarding, recruiter acquisition, and revenue generation.

While the long-term target is to raise up to ₹50 lakhs in pre-seed capital, the immediate focus is on securing an initial tranche of approximately ₹10–15 lakhs to achieve the next set of business milestones.

The funding structure is intentionally flexible and may involve:

- A single investor or strategic partner
- Multiple investors participating through smaller ticket sizes
- Phased investments linked to milestones
- Strategic investors from the education, recruitment, HRTech, employability, or student-services ecosystem

The immediate objective is to:

- Complete production-grade enhancements
- Onboard initial institutional customers
- Validate revenue models
- Establish measurable market traction
- Create a strong foundation for a larger follow-on round

Investors may participate at different levels, and partial funding can also be valuable as additional capital can be raised in subsequent phases as milestones are achieved.

Key Milestones

The proposed funding will be used to achieve:

- Production-grade platform enhancements
- Initial institutional customer base
- Recruiter onboarding and engagement
- Revenue validation
- Establishment of measurable market traction
- Preparation for a larger seed round

Next Step

Interested parties are welcome to:

- Review a live product demonstration
- Discuss the business model and roadmap
- Explore investment and strategic partnership opportunities

Founder Sandeep Jain

Technology professional with hands-on experience in building software products and working closely with educational institutions.

Passionate about creating infrastructure that improves outcomes for students, colleges, and employers.
